A photograph of two male workers in a factory setting. They are standing on either side of a massive roll of white paper. The worker on the left is wearing a grey t-shirt, blue jeans, and safety glasses, and is using a blue tape dispenser. The worker on the right is wearing a grey t-shirt, blue jeans, and work gloves, and is holding a roll of blue tape. They are both applying the blue tape to the surface of the large paper roll. The background shows industrial machinery and structural elements of the factory.

Wide choice of adhesives, foams and thickness for the results your customers demand.

For halftone work where dot gain is a concern, a softer tape optimizes reproduction. When solids and dots share the plate, a combination tape can properly balance the result. When your customer requires solid ink and crisp lines, you'll want a firm, high density mounting tape.

From the wide 3M selection, you can find the adhesives, foams, and thickness for the print quality that customers demand and expect. You'll also find choices to meet your handling requirements for:

- Mounting ease and positioning accuracy
- Easy, clean removal from plate and cylinder

Microscopic view of adhesive surface measured with interferometer.

3M Air Release Flexographic Plate Mounting Tapes

On easy with reduced air entrapment. Unlike flat or pebbled liners, E-Series liners are crosshatched. This imprints unique micro-channels into the adhesive that allows air to flow throughout. Air bubbles disappear from between the tape and plate, and between the tape and cylinder or sleeve for virtually bubble-free mounting. Setup is faster with smoother surfaces for cleaner print quality and higher productivity.

Stays on with reduced edge-lifting. Exclusive 3M plate-side adhesive maintains tight contact. Saves the prep time, downtime and labor of sealing plate edges.

Bubble-free print quality. Prevent blemishes in screen and process printing. Help assure proper registration.

E-Series Tapes with easy mount adhesive

Introduced the world to the features of 3M air release tapes. Peels off so easily you can virtually eliminate plate back treatment. You're less likely to damage plates, so you save time, labor and money.

L-Series Tapes with less removal force

3M L-Series combine the air-release feature with a unique adhesive technology. They are designed to provide easy and clean removal of printing plates across a wide range of printing applications with excellent resistance to plate lifting.

EH-Series Tapes to hold the edge on small diameter cylinders

3M EH-Series utilizes the air-release feature with higher plate side adhesion to resist edge lifting on cylinder diameters as small as 2 inches.

Plate Edge Sealing (cont.)

Multiple options with 3M™ Single Coated Tapes

3M™ Aluminum Foil Tape 425, 3M™ Vinyl Tape 471 or 3M™ Polyester Film Tape 850 are pressure sensitive adhesive tapes that bond on contact to seal plate edges against ink and solvent penetration that can cause edge lifting.

To seal plate edges against ink and solvent penetration that can weaken mounting tape strength, 3M™ Aluminum Foil Tape 425 (left) and 3M™ Vinyl Tape 471 (right) apply easily, bonding on contact and conforming over the plate edge.

3M™ Splicing Tapes Selection Guide

Temperature ratings are dependent on oven time, web tension, web speed and substrate thickness. See data page for exact temperature rating.

3M™ Splicing Tapes

Adhesive transfer and double coated tapes for reliable overlap splices

3M™ Adhesive Transfer Tapes

For an overlap splice, simply press the adhesive side of the tape to one of the surfaces to be spliced. Peel off the liner and you have a neat strip of adhesive for immediate bonding. Select from a range of adhesive properties.

3M™ Double Coated Tapes

Adhesive is on both sides of a carrier that increases dimensional stability of the adhesive for easy handling and application in making overlap splices.

High tack 3M™ Adhesive Transfer Tape 465 grabs fast for flying and zero speed splices, resists up to 250°F for 20 seconds.

With high tack and good shear strength, 3M™ Double Coated Tape 9420 splices plastic film quickly and securely. Red carrier identifies the splice for later removal.

3M™ Extended Liner Tapes

Versatile pressure sensitive adhesive on easy-to-remove liners

3M™ Extended Liner Tapes offer the adhesive versatility of 3M tapes but with liners wider than the adhesive. This leaves an easy-to-lift edge for convenient and easy liner removal. With the variety of adhesives, you have a selection of performance characteristics such as high tack for coated papers and plastics, low tack for temporary attachment, high temperature resistance and more. Apply manually or with equipment matched to your production volume requirements.

3M™ Extended Liner Tapes are available with a release liner wider than the adhesive. This provides an easy-to-grab edge for convenient liner removal.

Automatic and semi-automatic equipment is available for higher volume applications. For example, apply tape to business forms, literature, bounce back and business reply cards.

Depending on adhesive type, 3M™ Extended Liner Tapes are applied to envelopes, polybags, boxes or tubes. User simply peels off liner to expose the adhesive for an immediate, secure closure.

3M™ Extended Liner Tapes 450XL, 450EK and 465XL immediately bond product information “outserts” to polyethylene bottles. Holds tightly but can be cleanly removed.

3M™ Splicing and Repulpable Tapes

Tapes for paper mills and converters

From core starting to roll closing/tabbing and all the splices in-between, this totally repulpable line offers choices for the dependability you need to keep production at full speed. Backings and adhesives are engineered for optimum strength on every type of splice: flying, overlap, butt and general purpose.

Temporary Tapes

Good shear strength, high tack and reliable heat resistance

Permanent Tapes

High shear strength to stay with paper through sheeting, printing, slitting and perforating

3M™ Repulpable Splittable Flying Splice Tape eliminates the time and work of “V” and “W” patterns with a straight across flying splice. Advanced coating provides a smooth and consistent opening force. A fiber-free break open means less blanket cleanup.

High tack 3M™ Temporary Single Coated Repulpable Tapes are available in white, blue and kraft for dependable core starting, roll closing and butt splicing.

3M provides a complete line of core starting tapes that are easy to use and stick reliably every time.

For finished mill overlap splicing, 3M™ Repulpable Permanent Tape provides high shear strength without adhesive oozing or bleed through.

One simple splice with 3M™ Splittable Flying Splice Tape replaces complex patterns.

For core starting and roll closing, the hand-held 3M™ Repulpable Tape Applicator RTA-500 dispenses tape and disposes of the liner with one pull of the trigger.

3M™ Splicing Aids

Technology for knife cut signaling, core starting and more

Building on the wide variety of adhesives and backings, 3M has developed specialized tapes for splicing and other web process aids.

For example, black crepe paper tape conforms to the roll and signals the knife cut during the splicing process.

For reusing cores, double coated removable/repositionable tape features a permanent adhesive on one side of a carrier that bonds permanently to the core. Adhesive strength on the other side of the carrier holds paper and film with enough strength for reliable wind-up but easy release when unwinding.

High tack side of 3M™ Removable/Repositionable Tape 9415PC permanently adheres to the core. Low tack side holds paper or film for wind-up, yet releases when needed during unwinding.

To mark a roll with opaque black crepe tape to signal a knife cut during a splicing operation, you can select either the 5.6 mil thick 3M™ Crepe Masking Tape 2510 or the 7.0 mil thick 3M™ Photographic Light Blocking Tape 235. With conformable backing and rubber adhesive, both tapes hold securely at full operating speeds.

3M™ Concrete Repair Products

Fast, convenient crack and spall repair, expansion joints, custom threading and anchoring, and more

Repairs are long lasting with strong, flexible bonds that resist weathering, expansion and contraction.

Fast setting allows you and your customers to drive on repaired surfaces in as few as five minutes. You can choose non-sag or self-leveling formulations for repairs on both vertical and horizontal surfaces. Non-sag formulation facilitates step and ledge repair.

50mL and 400mL duo-pak cartridges are available to meet your production volume requirements. Nozzle automatically and precisely meters, mixes, and dispenses two-part urethane formulation. Apply material precisely where needed to conserve material.
