

LED Grow Lights

Steel Series

Steel Series

Beyond LED's Steel Series Grow light is the most unique and revolutionary product of 2021, with advanced red light spectrum for flowers and fruit, it is designed to fit your plant's growth stage. Our Grow Light uses an advanced red light spectrum that allows plant pigments to optimize their light harvesting and it's inspired by best practices used by professional growers. It's designed for mature plants at the fruiting or flowering growth stage. Compared to typical purple grow lights, the light features high PPF, or photosynthetic photon flux, to provide more light for photosynthesis and growth. The white light appears more natural to the human eye, so you can appreciate your plant's beauty and spot pests or discolorations to help keep your plants healthy. Use the advanced red light spectrum with high light plants like tomatoes, cucumbers, and peppers, at the fruiting or flowering stage of growth.

- The perfect plant grow light for commercial use: Show off your indoor garden without harsh or unsightly lighting
- Grow your plants throughout the year: These LED grow lights for indoor plants provide the perfect high-quality, natural light that will allow your indoor garden to bloom and flourish year round

SKU#152267 - 480W
1200μMol/s

SKU#152268 - 720W
1760μMol/s

SKU#152269 - 960W
2400μMol/s

- Long-lasting: Our Grow LED features advanced LED technology that uses less energy and generates low heat
- Our Grow Lights with advanced red spectrum for flowers and fruit: Our Grow Light has a red light spectrum that is perfect for tomatoes, cucumbers, peppers, flowers, fruit trees and pollinators during their fruiting or flowering growth stage
- Up to 2400 Mol/s
- Control multiple lights by the click of a button with built-in smart control system
- Full spectrum lighting
- Unique fan less design
- Suspension or surface mounting
- ETL Listed
- Full 5 years warranty
- Universal 100-277Vac

LED Grow Lights

Steel Series

480W Installation

1

There are two ways to mount your LED grow light fixture: Short hook Suspending Mounting and Steel Chain Suspending Mounting (default).

Find out the short hooks from the package and hang them on the shelf.

2

Then lift up the LED grow light fixture and hang it on the short hooks.

LED Grow Lights

Steel Series

480W Installation

3

Find out the steel chain from the package and hang them on the ceiling.

4

Then lift up the LED grow light fixture and hang it on the steel chain.

LED Grow Lights

Steel Series

720W & 960W Installation

1

Unfold the LED grow light module and make sure the light output surface toward the table.

**2**

Take out the lock-shaft and lock the attachable end cap.

**3**

There are two ways to mount your LED grow light fixture: **Suspending Mounting(default)** and **Surface Mounting**.

This is the Surface Mounting way: Using the long hooks to hang on the shelf.

**4**

Then lift up the LED grow light fixture and hang it on the long hooks.

LED Grow Lights

Steel Series

720W & 960W Installation

5

Make sure all the 4 loop hooks are hang on the lamp.

6

This is the Suspending Mounting way **(DEFAULT)**: Find out the steel chain from the package and hang them on the ceiling.

7

Then lift up the LED grow light fixture and hang it on the steel chain.

8

Make sure all the 4 steel chains are hang on the lamp.

Smart Control Tablet

The Beyond LED Smart Control Tablet system was developed by RS485 bus communication protocol. It's mainly composed of the main controller and RS485 adapter board. We also developed the temperature and humidity meter accessories for people easy to check the growing environment. The main controller uses 24-bit true color touch screen to realize human-machine interaction, making the control operation more simple and convenient. The RS485 adapter board receives the control signal from the main controller and converts it into 0-10v control signal to realize the switch and dimming control of lamps.

OPERATION INTERFACE INTRODUCTION BLOCK DIAGRAM

G	Sunrise light simulation display page, press this key to enter the secondary page for Sunrise mode parameter settings.
H	Display the high and low thresholds of the current temperature. Press this key to enter the secondary page to set the high and low thresholds of the temperature.
I	The high and low threshold value of current humidity is displayed. Press this key to enter the secondary page to set the high and low threshold value of humidity.
J	Switch the light button, press this button to realize the real-time switch of the light.
K	Press this button to enter the system setting page.
L	Zone A.
M	Zone B, the function is completely symmetrical with zone A.

THE CONTROLLER ELECTRICAL PARAMETERS

This is the main controller, it's responsible for reading temperature and humidity data regularly, control command transmission, data communication, human-machine interaction, etc.

Its main electrical indicators and interface definitions are shown in the following table:

Item		Technical Parameters	Remark
Electrical parameters	Input Voltage	DC 5V--12V	
	Input Current	≤ 0.5A at DC 12V	
	Radio frequency	ISM Band 2.4~2.5GHz	
	Indoor communication distance	50m	
	Radio transmitted power	+4dBm (Max)	
	Receive Sensitivity	-93dBm at 1Mbps	
	Network Topology	RS485 bus protocol for networking	

LED Grow Lights

Steel Series

Smart Control Tablet

THE CONTROLLER ELECTRICAL PARAMETERS

Item		Technical Parameters	Remark
Interface definition	Power	DC-005 electrical socket	Power DC inlet
	PJ-313*2	Audio interface	For the external temperature and humidity sensor
	RJ11*2	RS485 communication interface	For the connection of the main controller and RS485 adapter board
	KF141*2	Spring terminal	For external control
Structural parameters	L*W*H	201mm*130mm*39mm	
Other parameters	Working Temperature	-25 ~ 70 °C	
	Store Temperature	-40 ~ 85 °C	
	Relative Humidity	< 95 (No condensation)	

FUNCTION SUMMARY

The main controller uses 7 inch 24 bit true color resistance touch screen to realize human-machine interaction, The main functions and interface operation are briefly explained as below.

DIMMAIN FUNCTIONENSIONS

The main interface is divided into two completely symmetrical area controls, A and B, which are convenient to meet the needs of partition control.

LED Grow Lights

Steel Series

Smart Control Tablet

LED Grow Lights

Steel Series

Smart Control Tablet

TIMING SWITCH SETTING INTERFACE

It belongs to the secondary page, which is mainly used to set the timing for turn on/off of light regularly, as following picture:

LED Grow Lights

Steel Series

Smart Control Tablet

Slide the number to input the timing switch hours and minutes. After setting, "activation" needs to be clicked to enable this function. Press "OK" to exit the secondary page after setting.

SUNRISE AND SUNSET SETTING INTERFACE

The simulation of sunrise and sunset is mainly used to set the lighting changes during the simulation of the rise and fall of the sun, which is basically to set the dimming value of different time periods.

LED Grow Lights

Steel Series

Smart Control Tablet

The start time is setting for the local sunrise or sunset time, 1st time, 2nd time and 3rd time are respectively the duration of each segment. The corresponding scroll bar is the dimming ratio of the current period. After setting, "activation" needs to be clicked to enable this function. Press "OK" to exit the secondary page after setting.

THRESHOLD VALUES FOR TEMPERATURE AND HUMIDITY SETTING INTERFACE

The setting of temperature and humidity threshold is to set the high and low threshold of the current environmental temperature. When the temperature and humidity of the environment exceed the threshold range, peripheral equipment such as HVAC system and dehumidifier will be triggered to realize closed-loop automatic control.

LED Grow Lights

Steel Series

Smart Control Tablet

Press the input box to enter the number, After setting, "activation" needs to be clicked to enable this function. Press "OK" to exit the secondary page after setting.

LED Grow Lights

Steel Series

Smart Control Tablet

We use open-loop and closed-loop signal to control HVAC system and dehumidifier machines. The 1,2,3 jacks are for HVAC system to control the ambient temperature. The 4,5,6 jacks are for dehumidifier to control the humidity.

Control the HVAC system:

If the temperature is ON your setting range, the “1” and “2” jacks will be disconnected, the “2” and “3” jacks will be connected.

But when the temperature is NOT on your setting range, the control system will be warning, and the “1” and “2” jacks will be connected, the “2” and “3” jacks will be disconnected.

Control the dehumidifier:

If the humidity is ON your setting range, the “4” and “5” jacks will be disconnected, the “5” and “6” jacks will be connected.

But when the temperature is NOT on your setting range, the control system will be warning, and the “4” and “5” jacks will be connected, the “5” and “6” jacks will be disconnected.

Also we can customize that DC 12V/3.3V high low-level output to control the machines.

LED Grow Lights

Steel Series

Smart Control Tablet

SYSTEM INTERFACE

In system page "**Current time**" is the system's time, slide the numbers in the input box to complete the setting of hours and minutes respectively.

"**Max power**" Is the maximum power value of the current working lamp.

"**Temperature type**" is the setting for the temperature unit. There are Fahrenheit and Celsius options, and highlight means select.

"**Module Addr**" is the reading and writing of module address, mainly used for reading and setting of lamp address in networking.

"**Work Mode**" is working mode , there are five modes: automatic, spring, summer, autumn and winter, and the default setting is automatic .

"**Master Addr**" Set the working address of the current main controller.

The default addr is 0. However, when a individual lamp need to be controlled in the network, the same address should be set to the main controller so that the lamp can be control individual. The default is unified control.

"**QR code**" bluetooth QR code for scanning, click "close" to back to the main page of the system.
