

EAN:	4013288181596	Size:	265x50x35 mm
Part number:	05100085001	Weight:	130 g
Article number:	932 A SB	Country of origin:	CZ
		Customs tariff number:	82054000

- Chiseldriver for fastening, chiselling and loosening
- Smooth hard zones for high speed turning, soft grip zones for high torque transfer
- Multi-component Kraftform handle for fast and ergonomic screwdriving
- Hexagonal blade extending through the handle, impact cap with integrated square and bolster
- The Wera Black Point tip offers an exact fit and optimum corrosion protection

Wera chiseldriver for screwdriving, chiseling, mortising and slackening stuck screws. With multi-component Kraftform handle for fast and smooth work. Kraftform Plus: Hard handle zones for high working speeds, while soft handle zones guarantee a high torque transfer. The pound-thru hexagonal blade made of premium bit material ensures power transmission without loss even at hammer blows. Tough tempered material to prevent the blade from splintering or breaking. With integrated impact cap to increase service life and reduce risk of splintering. Higher torques can be transmitted with open-end or ring spanners using the integrated hexagon bolster. The Wera Black Point tip and a sophisticated hardening process guarantee a long usability for the tip, increased corrosion protection and exact fitting accuracy. With hexagon anti-roll protection to avoid bits from rolling away annoyingly in the workplace.

Integrated impact cap

Screwdrivers are often misused as chisels. This can be dangerous. The chiseldriver is the solution when not only screwdriving is required. For fastening, chiselling and loosening seized screws. Wera chiseldriver: the screwdriver whenever the going gets tough!

An integrated impact cap lengthens the service life and reduces the danger of splintering. Nevertheless, always wear protective goggles.

Pound-thru blade

A hexagon blade made out of high-quality bit material extends right through the handle - thereby ensuring full transfer of force, even when struck with a hammer. The ductile tempered material prevents the blade from splintering or breaking.

Integrated hex bolster

Greater torque can be transferred by fitting an open-jaw or ring spanner over the integrated hex bolster.

Wera Black Point tip

The Wera Black Point tip and a refined hardening process ensure long service life of the tip, improved corrosion protection and an exact fit.

Kraftform

The basic idea for the prototype of the Kraftform handle - that the hand should dictate the design - has, right through to today, proved to be correct. In cooperation with the internationally recognised Fraunhofer IAO Institute, Wera developed a screwdriver handle designed to match the shape of the human hand as long ago as the 1960s. After a long development phase, the Wera Kraftform handle was launched to the market in 1968. It has been optimised through the years with new technologies, but has kept its proven shape. After all, the human hand has not changed either.

Rapid hand repositioning

The hard materials used for the handle ensure rapid hand repositioning without any danger of the skin "sticking" to the handle. The surrounding hard zones with large diameters glide like wheels through the hand.

Non-roll feature

The hexagonal non-roll feature prevents any rolling away at the workplace.
