

pH CONTROLLER WITH ALARM

A pH controller that alarms *when pH is out of range!* Not just an “output” that needs considerable wiring work to actually produce a useful alarm, but ready out-of-the-box. In addition, an LED stack light indicates pH in-range, or out-of-range, and when the pumps are active. Perfect for waste treatment where upsets are time sensitive.

Separate control points for the high pH pump, the low pH pump, high alarm and low alarm. Data-logger port is built-in so its ready to plug in the optional data-logger.

Features:

- Easy to set up, operate and calibrate.
- Convenient front button silences the buzzer.
- Convenient buttons to force pumps on. (useful for pump calibration, priming, drum emptying)
- Waterproof. Suitable for wash down duty.
- *Simple* instructions by video and print with images.
- Override button to manually turn pumps ON.
- Outputs included are 4-20mA and RS485.
- Notifications by email or text using WIFI. (optional)
