

# Cement Swab

## DESCRIPTION

**Black Swan's Cement Swabs** are used with large diameter pipes. Most of the time the applicator supplied with most solvent cement cans is too small so our **Cement Swabs** are the solution. By using this small applicator, the cement will not be supplied quick enough and the probability of making a successful connection is decreased.

The **Cement Swab** comes in two sizes - quart for pipe diameter 3" to 8" and the gallon for 6" or larger. The quart swab fits a standard quart cement can and the gallon swab fits a 2-7/8" open gallon container. The **Cement Swabs** will allow the user to apply the cement quickly to make for a good connection.
