

Detectable Marking Tape - Blue Water Line

DESCRIPTION

Black Swan's Detectable Marking Tape is a superior detectable marking tape used for location and early warning protection for non-metallic underground lines. The solid aluminum core is encased between two layers of plastic with an overall thickness of 5 mil (.005"). With proper detection equipment this tape is easily located. All printing is encapsulated in the tape providing a permanence of message.

DIRECTIONS

For best results shallow bury tape 6" - 12" from finished grade, ensuring maximum distance between warning tape and buried pipe.
