

10 YEAR MANUFACTURER'S LIMITED WARRANTY

All parts of this FAUCETURE faucet are warranted to the original retail purchaser to be free from defects in material and workmanship for a period of Ten(10) years from the date of purchase as shown on the purchaser's receipt.

This warranty is limited to defective parts only, labor charges and/or damage resulting from improper installation, repair or replacements, as well as incidental and consequential damages connected therewith are excluded.

Any damage to this faucet as a result of misuse, abuse, neglect, accident, or improper installation or any use not consistent with the instructions furnished by us, will void this warranty. Replacement parts can be obtained from your local dealer. Freight cost is not covered by manufacturer.

CAUTION!!!

1. Water lines must be completely flushed before use, to avoid debris & clogs in your water system leading to reduction of water flow and mal-functioning.
2. Warranty is void if water lines are not flushed prior to use and installation of the new faucet.
3. Use of abrasives of any strength may damage the finish of the faucet and void the product warranty.
4. Do not over tighten your faucet on the countertop during installation. The valve assembly is tested to meet the standards set by ASME A112.18.1 sec 5.8 which is listed at 100 LBF. However, over-tightened or over-torqued nuts may lead to cracks on the valve and will eventually lead to leaking and water damage.
5. Before installation of the faucet to the desired fixture, you need to secure and anchor your console, sink, tub, or vanity cabinet firmly to the wall and to the floor. To ensure your fixture or faucet mounting surface cannot be moved, before installation of the faucet, please test to see if the cabinet or vanity can be moved by hand or body weight. If the faucet mounting fixture is not secure and anchored, it will eventually crack the valve and cause leaking leading to property damage. In order to avoid this, be sure to secure your installation surface. Do not use any Power Tools for assembly and installation which can cause internal fractures to the fixture.

FAUCETURE

PROBLEMS SHOOTING

PROBLEM	CAUSE	CORRECTIVE ACTION
Leaks underneath handle	Bonnet nut has come loose	Remove the handle and tighten the bonnet nut
Leaks from the spout	Valve seat and spring are worn	Replace the valve seat and spring
Inconsistent water flow pattern	Aerator is dirty or aged	Release aerator and check on rubber gasket if aged or replace with a new aerator
Faucet is dirty	Caused by stubborn water spot	Clean with mild soap and warm water as often as possible
Handles work backward	Handle installed backward	Rotate the right stem stop assembly 180 degrees

Parts:

Washer & Lock Nut	Cone Washer & Coupling Nut

INSTALLATION INSTRUCTIONS

For Use With FF's Single Handle Bar Faucet

BEFORE BEGINNING INSTALLATION

1. Flush plumbing lines to clear debris in pipe and plumbing lines to avoid existing clogs into waterway & cartridge system of new faucet fixture.
2. Shut off both supply lines after flushing.
3. Recommended faucet hole diameter to be 1-1/2".

1. Shut off hot and cold water supply under sink. Plug sink drain with cloth to avoid losing small parts. Remove old faucet.

2. Place optional Escutcheon or flange on bottom of new faucet before position faucet through mounting hole. Screw the mounting stud into the body. Secure the faucet to sink by installing rubber washer, steel washer and nut onto it. Tighten with wrench.

3. Apply Teflon tape to inlet shanks and connect supply lines.

4. Apply Teflon tape to threads on faucet shank and shut off valves, connect water supply line.

Need Tools:

Basin Wrench

Adjustable Wrench

Teflon Tape

Silicone Sealant

Screwdriver

5. Turn on water supply valves and check for leaks, especially all supply line connections.

6. Remove aerator and turn on both hot and cold valves, let water run for at least one minute, this will clear any debris left in the line, reinstall aerator.

Warning!!!

- Do not over-tighten nut during installation.
- Over-tighten may crack the valve and cause severe leak.

This exploded view diagram illustrates the assembly of a water tap. The components are numbered as follows:

- 1**: O-ring
- 2**: Cap nut
- 3**: Hot water supply pipe
- 4**: O-ring
- 5**: Stop nut
- 6**: O-ring
- 7**: Hot water tap handle
- 8**: Hot water tap body
- 9**: Cold water tap handle
- 10**: Cold water tap body
- 11**: O-ring
- 12**: Cold water supply pipe
- 13**: Cold water tap handle
- 14**: Cold water tap body
- 15**: O-ring
- 16**: Tap plate
- 17**: O-ring
- 18**: O-ring
- 19**: O-ring
- 20**: O-ring
- 21**: Cap nut
- 22**: Cap nut

Cartridge: KS RP 3891 C

Handle: LSH 2721 NYL

* Never use cleaners containing abrasive cleansers, ammonia, bleach, acids, waxes, alcohol, solvents or other products not recommended for chrome. This will void the warranty.

If your faucet is already looking somewhat dull and tarnished, before replacing it, try cleaning it with a 50/50 solution of vinegar and water, you may need to soak some rags and wrap around those stubborn areas, leave overnight and rinse completely in the morning, apply Carnuba wax once you have removed the mineral deposits.
