PUMPS FOR CLASS 1 AND 2 FLAMMABLE LIQUIDS

Winner of the prestigious 2010 Plant Engineering Product of the Year, the SCP-6500 Pumps are the latest pumping solution for spill-free, environmentally safe transfer of class 1 and 2 flammable liquids. Created for most demanding safety programs, these pumps meet NFPA 77* which requires that the path to ground must prevent the accumulation of static electricity in conductive equipment.** The SCP-6500 pumps feature the same breakthrough technology which has made GoatThroat the most trusted name in transfer pumps.

All components of this new pump which come in contact with the fluid are created with conductive plastic, so there is grounding of the liquid, the pump, and, with correct bonding, to the container. Featuring a lug with a grounding wire on the front of the pumps, and made with conductive plastic, the SCP-6500 Pumps also comes with a 48-inch long siphon tube, setting a new industry standard.

A worldwide leader in environmentally preferable liquid transfer solutions, GoatThroat Pumps are designed to fit containers and drums from 5 to 55-gallons, are available in four models for chemical compatibility, and have a cost-effective life expectancy of 10 to 15 years. They provide for spill-proof, safe transfer of over 900 fluids and solvents.

* N.F.P.A. 77, Para 6.4.1.3 "... ≤ 1 Megohm (10^6 ohms)." SCP-6500 are 80 Kohm (10^3 ohms)
