

Turf-Tec Moisture Sensor

Turf-Tec Moisture Sensor - For all turfgrass areas. Specially designed quick probe depth adjustment from zero to four inches deep. Instant read out dial tells you the percentage of moisture in the soil. This is the ideal moisture meter for testing soil moisture as the Turf-Tec Moisture Sensor is simple to use, easy to read meter and very durable.

Stop guessing about soil moisture, find out the amount of water in the pore space within the soil in percentages of soil moisture. If readings are below 25%, there is not enough moisture for the turfgrass roots, if the soil moisture readings are above 75%; there is not enough air space in the soil.

Locate saturated soils

deep in the profile. Monitoring soil moisture insures consistency in playing conditions from one golf green to another or one athletic field to another. Excellent tool for use in water audits and in the whole urban ecology.

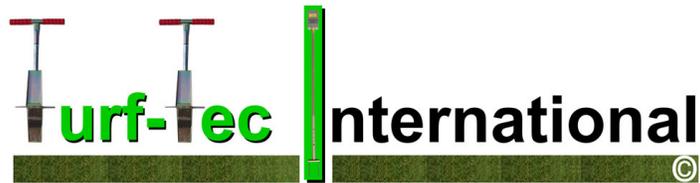

A quick and convenient way of monitoring soil moisture on all turfgrass areas.

Check Soil Moisture on:

- Golf greens, fairways, golf tees.
- Sports fields.
- New construction.
- Lawns.
- Playgrounds.
- Locate dry spots.
- Locate layers.
- Check sprinkler performance.

Specifications:

- Easy to use.
- Read out in percentages - 0 - 100%
- Instant readings.
- Durable and reliable.
- Adjustable foot from 1-4 inches deep.
- Overall height 48 inches tall.
- Weather proof non-corrosive metal.
- Read out is at eye level to avoid bending down.

Have your irrigation technician's carry one at all times.

<p>Close up of Turf-Tec Moisture Sensor Face - Readings in percentages from 0 - 100%</p>	<p>Top of Turf-Tec Moisture Sensor</p>

Check moisture readings at each level of the soil horizon. Adjustable from zero to four inches deep. Check moisture in thatch, mat and soil above and below the root zone. Very useful for checking moisture on golf greens and all turfgrass areas. Small 3/16-inch probes will not damage fine turfgrass areas or stressed turf. Determine if layers are causing a problem with water movement in the soil profile. The Moisture Sensor shows the actual amount of moisture available to the plant. Use the Moisture Sensor to correlate irrigation time with infiltration rate.
