**Bit sockets with holding function for TORX® screws**

The HF tools developed by Wera are ideal because they feature an optimised geometry of the original TORX® profile. The wedging forces resulting from the surface pressure between the drive tip and the screw profile mean that TORX® screws made according to Camcar Innovations, Michigan, USA specifications are securely held on the tool!

**Secure hold and easy removal**

The all new smooth turning mechanism guarantees both secure and rattle-free storage, yet allows easy removal of the tool.

**Manual and machine sockets**

The manual and machine sockets can be used both for hand and power tools use (non-impact). Users need just one socket set for all applications.
