Environmental Information

Raw materials

Cellulose pulp

Polyester

Polypropylene

Functional agents or additives

Cellulose Pulp

Cellulose pulp is produced either from softwood or hardwood coming from responsibly managed forests. The wood chips are boiled together with chemicals to remove the lignin between the fibers. The pulp is TCF (Totally Chlorine Free) or ECF (Elementary Chlorine Free) bleached in order to achieve a clean, bright and strong product, but also to increase the hygienic and absorbent qualities.

Polyester

Polyester fiber is produced from terephthalic acid and ethylene glycol, which react through condensation to polyester resin. The molten resin is spun to fibers through spinnerets and cooled with air. The fibers are then cut to intended fiber length.

Polypropylene

Polypropylene or polypropene is a thermoplastic polymer made from oil. The molten resin is spun to endless fibers through spinnerets and cooled by air. The fibers form a web.

Functional agents and additives

Functional additives could be wet strength agent, antistatic agent and wetting additives /tensides.

Packaging

Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes

Article creation date and latest article revision

Date of issue: 19-04-2019
